Hadley Heffta

Online Fundraiser

Hadley Heffta, daughter of Kirsti & Derek Heffta of Ulen, was diagnosed with a very rare genetic disorder called Beckwith-Wiedemann Syndrome shortly after birth. With this diagnosis comes a 30% higher risk of childhood cancer, and every 3 months until Hadley is 9 years old, she will undergo cancer screens that consist of an abdominal/renal ultrasound and blood tests. Hadley also has macroglossia (an enlarged tongue) which is a common marker for BWS. She will undergo surgery called the "Modified Keyhole Glossectomy" (a tongue reduction) at Children's Hospital of Minneapolis. This is a fairly traumatic surgery with a tough recovery that will require a minimum of five days in the hospital. She will have an additional surgery, that will require a separate stay at Children's Hospital, to place tubes in both ears to fight a constant battle of ear infections. Money raised will help with medical, travel, and lodging expenses related to treatment and lost wages while Kirsti and Derek care for their child. Hadley has two big sisters at home, Maci (4) and Charli (3).
